

CORPORATE BROCHURE

**Christiaens
Group**

WE ARE CHRISTIAENS GROUP

Christiaens Group offers innovative solutions for mushroom cultivation, organic waste composting and mycelium products. Solutions that improve our partners' output while contributing to a circular economy. We create added value from organic flows thanks to "The Power of Combined Experience". Decades ago we were the first in the market who had all disciplines within the company like construction, technical installation and controls. A leading position we still have today and which we constantly strive to maintain. Based on your wishes, we deliver individual parts of a project or turnkey.

We have two locations:
our headquarters in Horst, the Netherlands,
and our site in Kunshan, China.

From engineering until warm start-up

WE TALK TECHNIQUE

It is our DNA; it is our strength. High quality and based on the latest developments. We are among the best and largest manufacturing companies in the Netherlands. Our technical engineering made us big. And we are proud of it.

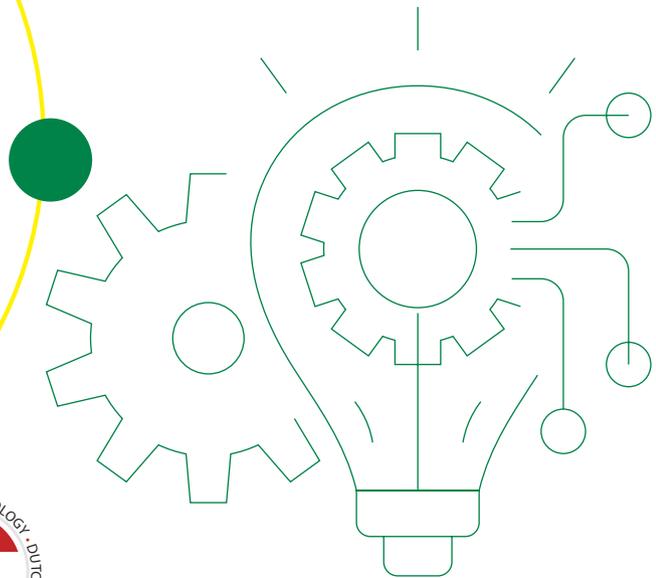

WE ARE LEADERS IN INNOVATION

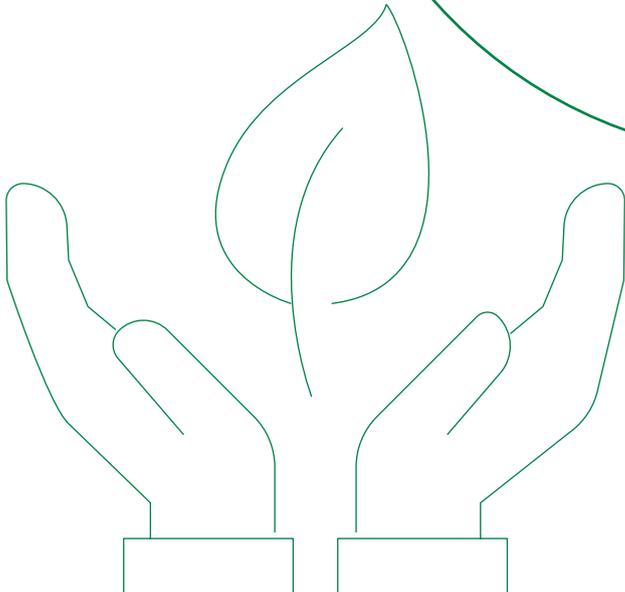

We think in possibilities and therefore see opportunities. We listen to our customers and partners. We explore emerging technologies, push boundaries, learn from our mistakes and so effectively turn innovation into new solutions that really benefit our customers.

WE EMBED SUSTAINABILITY

In everything we do. We are active in markets that are driven by sustainability. It is our driving force. Because we want to make the world more sustainable and because we believe in a circular economy. An economy that makes single-use raw materials a thing of the past. For us, sustainability is more than saving energy, reducing your ecological footprint or becoming CO₂ neutral. It is also about living in good health, a working environment that gives you energy and sustainable relationships with our partners that are inspiring.

We think and work with an innovative, solution-oriented mindset. We share our expertise with partners and this is reflected in the solutions that are good for people, business and nature.

MARKET LEADER IN MUSHROOM COMPOSTING

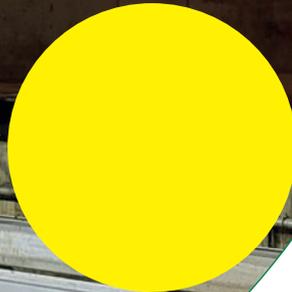

From phase 1 to phase 3, Christiaens lays the foundation for successful production. The right recipe, precise mixing, and reliable pasteurization and spawn run are essential for optimal output. We provide complete solutions or individual machines, including aeration and air handling systems, odour management, mixing, straw lines, make-up units, machinery, and the building itself.

With a strong focus on process control, hygiene, labor, and energy efficiency, our customers achieve reliable performance and maximum operational efficiency.

Composting systems:

- » Phase 1 bunkers (spigot floor)
- » Phase 1 tunnels (grid floor / moving floor)
- » Phase 2/3 tunnels

MARKET LEADER IN MUSHROOM GROWING

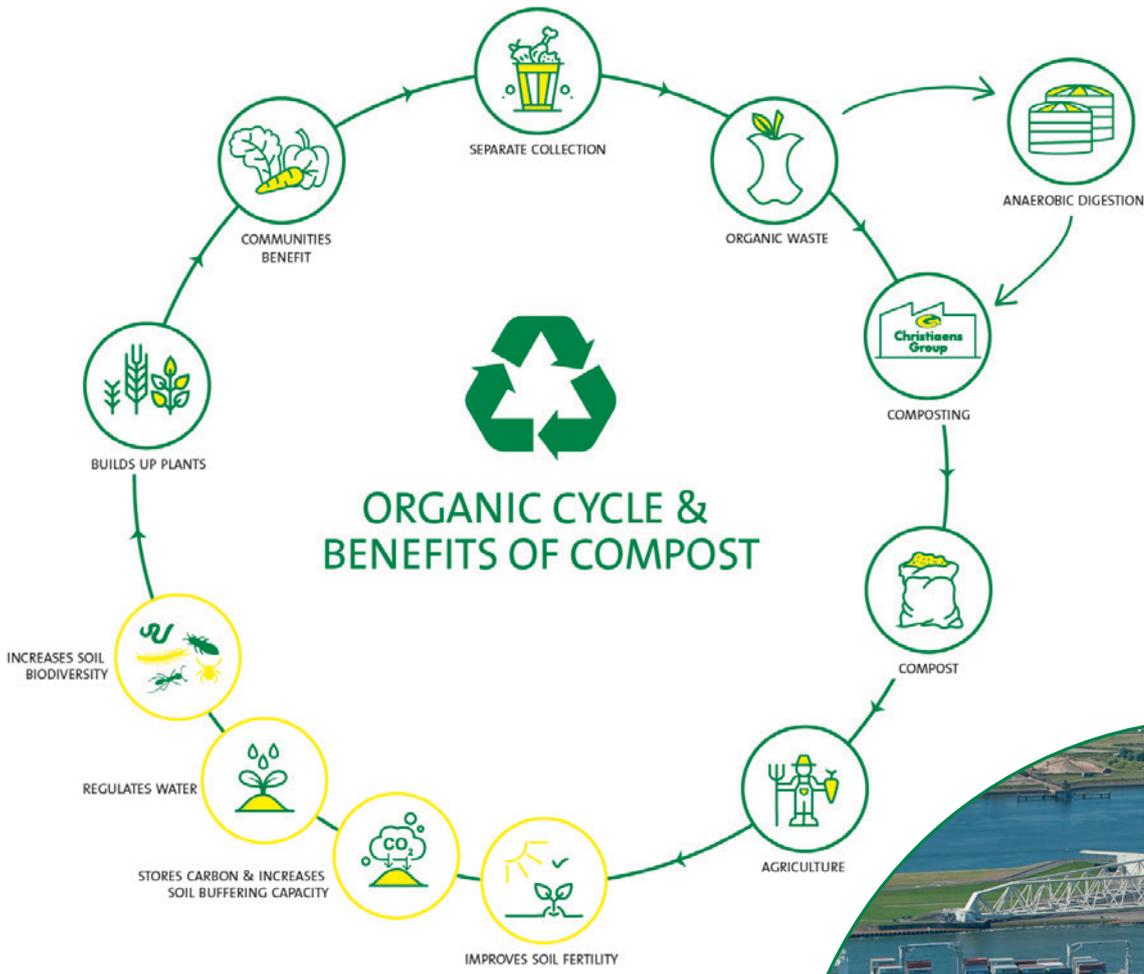

Growing is where preparation turns into performance. Christiaens delivers reliable and innovative growing systems designed for maximum yield and consistent quality.

We offer advanced growing solutions, including the traditional Dutch shelves and the future-proof Drawer System, featuring various automation options.

Our growing solutions maximise yield, ensure consistent quality, and deliver a strong long-term return on investment.

ORGANIC WASTE COMPOSTING

In-vessel composting (IVC) provides a controlled and efficient way to process organic waste within a fully contained system. By optimizing microbial activity, it accelerates decomposition, minimizes odours, and reduces environmental impact — producing high-quality compost that supports sustainable operations.

With advanced air scrubber systems and biofilters trusted worldwide, Christiaens ensures reliable odour control and environmental compliance.

- Composting systems
 - » Municipal solid waste
 - » Biowaste
 - » Green waste
 - » Anaerobic digestion residue
 - » Animal manure
 - » Sewage sludge
- Odour management

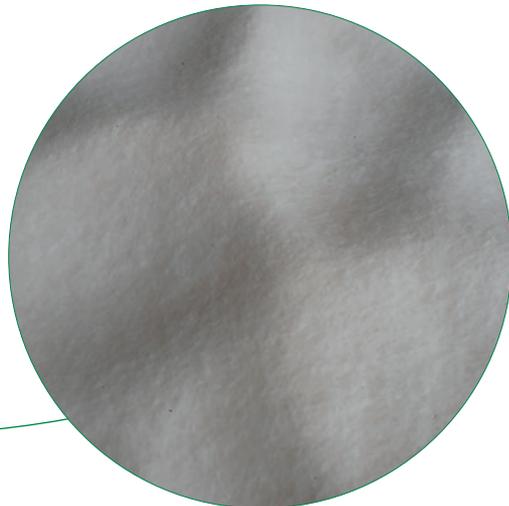

MYCELIUM CULTIVATION

Christiaens' Mycelium Solutions help you transform innovative ideas into scalable, high-quality products. With extensive expertise in mushroom technology, we support the production of premium mycelium, the biological foundation for applications such as: vegan leather, packaging, and sustainable building materials.

We work with reliable technology and offer practical expertise to produce consistent, high-quality mycelium at scale.

- Mycelium growing systems
- Substrate preparation
- Product handling systems

A large green industrial machine, likely a cable bender, is parked on a paved area in front of a building. The building has a white section with the Christiaens Group logo and name, and a red brick section. The machine is green with yellow accents and has 'Christiaens Group' written on it. The entire scene is framed within a circular cutout.
